

High praise for feeders that require a low head position.

Dressage trainer Janet Reed is always looking out for her horses. Compassion for equines drives her in her training business and is what drove her to build a better feeder.

Too many horses eat with their heads up high and Janet knows that a horse's head reaching towards the ground is the best way for a horse to eat. It's the natural grazing position that makes the horse a happy creature.

With her patent pending design, Janet Reed's Natural Horse Feeders are made of wood that is oiled with linseed oil, which is natural deterrent to chewing. The depth of the box is set so that they cannot rub their eyes on the dowels that keep the hay from getting pulled out. Janet had a veterinarian approve her design that encourages a more natural position of eating for horses.

January 2019 - Janet Reed's Natural Horse Feeders

Written by CRM

Janet Reed's Natural Horse Feeders are designed to help horses eat more slowly and digest their food better. The feeders are made of wood and have a slanted top that allows horses to see the food and rocks. The rocks are made of a special material that is safe for horses to eat and helps to break down the food in the stomach. The feeders are available in a variety of sizes and colors.
